Index: electronic engineering January to December, 1970

MAIN THEMES

January
Signal recovery techniques
Encapsulation of electronic components

February
Design parameters and applications of thyristors
Environmental testing techniques

March
Designing regulated power supplies
Behaviour of capacitors exposed to radiation

April
Oscilloscope design and applications
Designing solid-state lamps

May
I.E.A. preview
Temperature and transistor circuit design

June
Custom design of hybrid microcircuits
Environmental testing of electronic components

July
Active circuits in telemetry
Solid-state at microwave frequencies

August
What's new in miniature relays and switches
An i.f. amplifier for 600MHz

September
Aircraft data-handling systems
Designing *RC* active filters

October
Reliability in the design specification
Inter-Nepcon preview – packaging and connections

November
Applications of materials in electronics
GaAs devices in microwave communications

December
Digital measuring and counting
Small computers speed circuit testing

FEATURE ARTICLE INDEX

	Issue	Page
Airborne computers – is the special-purpose machine economically effective? by J.T. Shepherd.	9	44
Airborne data aquisition – solving system-design problems. by R.S. hopkins	9	52
Analogue modules?, can you afford to ignore. by Bill Gledhill.	3	63
Analogue multipliers, a high-accuracy four-quadrant time-division. by N.W. Bellamy and M.J. West.	7	30
Applications: Motor starter – four-bit storage register – end-of-charge sensing – transistorised water-level sensor – phase-sensitive detector – reverse drive for induction motors – relay driver.	4	79
Analogue techniques aid haemodynamic studies – a fundamental frequency crystal oscillator – low-frequency function generator – temperature controllers – measurement of Hall-effect using a p.s.d.	5	98
Automatic-set timers – keyboard encoder – peak-level grading system – sample-and-hold circuit – t.t.l.-to-m.o.s. interface – novel data-collection technique speeds aero-engine analysis – the op.amp. as an ompedance converter.	9	96
Using m.o.s. linear i.cs. – op.amp. circuit for rate-sensing differentiator – asynchronous counters – precision reference voltage supply – simple anticoincidence circuit compatible with i.c. logic – digital Q-meter – an r.f. level control.	10	94
Binary-to-decimal conversion – negative feedback f.e.t. bias circuit – image matching in parametric circuits – analoque signal peak-value detector – a wideband balanced amplifier at u.h.f. with low intermodulation distortion – overload-protection lamp flasher circuit – integrated-circuit television i.f. amplifier.	11	84
Signal isolation by fibre-optic transmission gated oscillator with level control – magneto-resistive probe – checking oscilloscope rise-time – simple precision pulse radar transmitter – logarithmic amplifier – optoelectronic logic using the l.a. thyristor – microwave power standard – allow for phase shif? in feedback error calculations – phase detector.	12	69
Bridge method simplifies screening-factor measure-ments, by A. Tomica	9	76
Bulk-effect devices can simplify interconnection problems, replacing s.i.cs with. by D.F. Dunster	11	57
Capacitors exposed to high-energy radiation, behaviour of. by M. Kobale and G. Seebacher	3	52
Connectors – a necessary evil, by Bill Mitchell	7	49
Crystal growth, liquid encapsulation important to. by R. Davies	1	58
Current-driven input gate for serialisers, by I.G. van Breda	7	46
D.C. regulators for low voltages, by P. Williams	3	41
Delay timebases. by E.J.G. Salmon and K.R. Wilshire	4	50
Delay circuit with monostables and bistable properties, by A.F. Lewis	6	84
Diamond heatsinks, by R. Berman	3	43
Difference amplifier, feedback improves the stability of. by J.H. van Boom and W.C. van Etten	12	48
Digital frequency discriminator, by J.D. Last	7	42
Digital multimeter for volume production, designing a. by J.A. Rose	12	39
Digital temperature indicator incorporates auto-matic controller, by R.K. Sharma and A.K. Jain	12	43
Drift elimination in integrating a-d converters, by D. Velasevic	3	49

	Issue	Page
Electronics in the 70s – a look at possible developments during the next decade, by Bill Mitchell	1	33
Electronic firms less confident about the short-term prospects for their industry, by our Economics Correspondent	5	55
Encapsulation for 'professional' components, by V.P. Emmerson	1	60
Entering information into registers from multi-position switches, by C.R. Kill, J.S. Howell and B. Rowe	5	77
Environmental test laboratory, work of a. by S. Milk	2	45
Environmental testing applied to electronic compnoents, by R. Duffy	6	70
Equipment in relation to its environment, by D. Twivey	2	48
European connector challenges USA domination, by A. Hallam	10	81
F.M. telemetry with active circuits, inexpensive by A.M. Kubo	7	26
'Film-wire', from design to production with. by A. Clark	5	93
GaAs devices in microwave communications, major role for. by J.C. Bass	11	61
High-performance voltage-to-frequency converter has improved linearity, by F. Bombi	12	65
High-quality ceramics, wide range of applications for. by R.C. Kell	11	46
High-resistance measuring device, simple medium-precision. by A.C. Corney	8	46
Hybrid microelectronics, the history and future of. by D. Boswell	1	54
Information storage with high-purity iron, by W.D. Glaeser	11	50
Insulated-gate transistor, a brief history of the. by N.F. Durant	5	70
Integrating magnetometer measures superconductor characteristics, by E.T. Powner, J.B. McKinnon and P.J. Elce	10	52
600 MHz Intermediate frequency amplifier, by D.R. Bowman	8	30
Ion doping of semiconductors, by H. Heys	5	74
Landing, take-off and en-route guidance using an i.l.s., by E.O. Willoughby	2	66
Low-cost spectrum analyser from basic modules, by E.M. Bliss	12	56
Low-cost video distribution amplifier gives increased reliability, by G.A. Stevens	10	47
Low-noise f.e.t. input amplifier for a spaceborne magnetometer, by S. Cantarano and G.V. Pallottino	9	57
M.S.I. counters generate arithmetic functions, M.W. Ramsey	12	34
Magnetic recording – latest developments in ground and airborne systems, by M.A. Perry	9	48
Magnetic screening, by J.J. Field	2	60
Materials research leads to advanced devices, by Bill Gledhill	11	38
Metallurgy of microconnection soldering, by J.E. Tomlin	3	59
Microelectronics in airborne equipment, by Bill Mitchell	6	67
Monitors and detectors for radiological protection, by H. Heys	11	80
Monostable multivibrator, an interval to pulse-rate conversion technique using a. by S. Klevenhagen	1	44
Multiplexer for complex binary numbers, by D.P. Burton, P.C. Byrne and D.R. Noaks	4	71
New materials the answer to competition, by J. Keat	11	54
Normalised junction f.e.t. curves, by N. Strange	2	53
Oscilloscope design and applications, some advances in. by A.R. Millard	4	53
Oscilloscope for research and development, designing an. by F.W. Jory	4	45
Oscilloscope for services environment, designing an. by D.J. Rackman	6	74
Phase sensitive detector using junction f.e.ts., wide bandwidth, by J.L. Linsley Hood	4	62
Plastics encapsulation of components, by W.E. Simpson and K.A. Pettican	1	50
Power supplies, economical dual-polarity, by A. Gowthorpe	3	53
Power supply, a high-stability, programmed solid-state pulsed laser, by L.E. Erickson and C.M. Spencer	3	36
Power thyristors, design parameters for. by J. Rumberg	2	40
Primary cells help to reduce equipment size, by D. Naylor	10	74
Pseudologarithmic scales for ion chamber radiation measuring instruments, by B.W. Stoole and W.F. Jager	5	83
Pulse delta modulators – inferior performance but simpler circuitry, by R. Steele	11	75
Pulse discriminator takes advantage of backlash, by H.A. Cole	9	81
Radio-frequency phase-shifter has constant delay, by R.H. Frater	12	52
Radio telephone communications, high quality. by E.S. Sharp	4	74
Relays and switches, what's new in miniature. by Bill Mitchell	8	37
Reliability in the design specification, by Z.S. Siemaszko	10	41
Remote control and communications systems using m.v. networks, by J.W. Townsend	10	67
Ring of three as an *RC* active filter, by F.W. Stephenson	9	63
S-band solid-state swept frequency oscillators, by D.R. Bowman	7	37
Screening effect of air coils and metal cylinders, comparing the. by J. Mantel	10	79
Semiconductor products in Japan, recent developments in by K. Kataoka	5	59
Signal recovery using a phase-sensitive detector, by P.C.G. Danby	1	36
Small computer speeds circuit testing, by P.C. Michael	12	60
Solderability of round-wire terminations after long storage, assessing the. by L. Ochs	10	84
Solid-state lamps, designing. by B.L.H. Wilson	4	65
Stochastic computers solve more problems faster, by J. Halliwell	10	63
T.T.L. really superior to d.t.l., is, by J.A. Tempel	9	70
Tabular method for flip-flop equations, by N.N. Biswas	8	34
Temperature and transistor circuit design – Part 1., by T. Spencer	5	62
Temperature and transistor circuit design – Part 2., by T. Spencer	6	76
Thin-film circuits benefit from r.f. sputtering techniques, by J. Beynon	11	43
Thin-film hybrid circuits, custom design of. by K. Harrison	6	63
Thin-film hybrids, circuit design for. by T.D. Towers	6	59
Thyristor choppers, high frequency. by F.F. Mazda	2	34
Thyristor-controlled d.c. motors, by S. Denyer	5	88
Time-delay circuit, a wide-range linear by B.D. Rakovich and S.L. Tesic	4	57
Trigger circuit can realise any Boolean function of three variables, by R.M. Gascoigne	11	67

	Issue	Page
Using two-state i.cs. with ternary signals, by W.J. Rosser	9	84
Variable gamma corrector for television video signals, by K.G. Freemand and R.E. Ford	9	94
Voltage boosting reduces thyristor commutation components, by F.F. Mazda	10	57
Voltage sweep generator, by K.E. Forward	3	44
Voltage stabiliser, a simple battery. by J.C.S. Richards	3	48
